

# On compactly supported ideals

Piotr Borodulin-Nadzieja

15-16 V 2019

We show that  $F_\sigma$  ideals cannot be *compactly supported*. We have some applications of this result: strengthening of Ptak's lemma and Mazur's lemma (classical results in combinatorics and Banach space theory) and a nice example of ideals being, in a sense, higher order versions of the density ideal.
